LA7: Routing Implementation using ExpressJS

```javascript
const express = require('express');
const app = express();

// Define a route for the home page
app.get('/', (req, res) => {
  res.send('Hello, welcome to the home page!');
});

// Define a route for about page
app.get('/about', (req, res) => {
  res.send('This is the about page.');
});

// Define a route for contact page
app.get('/contact', (req, res) => {
  res.send('Contact us at example@example.com.');
});

// Start the server
const PORT = 3000;
app.listen(PORT, () => {
  console.log(`Server is running on port ${PORT}`);
});
```

localhost:3000

Hello, welcome to the home page!
